# Market Commentary

Global PMIs are at their lowest since November 2016 as export order downturn negatively affected production, orders and job employment. PMI data suggest an easing of price pressures and supply constraints. The most notable weakening was seen in terms of new export orders, which fell (albeit marginally) for the first time since June 2016. The decline represents a marked contrast to the near seven-year high rate of increase seen at the start of this year and coincides with a period of growing global trade tensions led by the US.

Overall, order books continued to grow, supported by domestic demand, but the trade slowdown meant the rate of increase slipped to the lowest level for two years. Backlogs of orders meanwhile showed the smallest rise for 23 months as production expanded at a rate that outpaced new order inflows, albeit with production growth also hitting a two-year low.

Within the US, September PMI data added to signs that the US economy continued to expand in the third quarter despite the slowdown in momentum within the domestic economy. There are signs of cooling within the US housing market with home sales lower than expected at 5.42 million for September. The labour market continues to tighten as jobless claims declined larger than expected at 255 000 for the month of September. Capital expenditure expanded with shipment of durable goods expanding 2%. Growth in the US appears strong while trade tensions continue to pose a risk in the near term.

Within the Eurozone, macroeconomic data shows signs of weakening with growth on a downward trend since its peak in the middle of 2017. Exports growth has slowed with the slowdown led by China. The European central bank has gradually tightened monetary policy with quantitative easing slated to end in December 2018. Despite that, financial conditions remain extremely accommodative

and supportive for the economy.

Within the emerging markets space, rising US rates and the USD dollar strength has been a detractor on returns. Economic growth has held up far better than financial markets in the emerging world over the past few months. But while some countries will continue to do well, EM growth in aggregate is now slowing and will continue to decelerate over the coming year. Worries about China's economy have grown as domestic momentum has slowed and trade tensions have escalated. Officials are ramping up policy support. But we think growth will not stabilise until the middle of 2019. Within equity markets, MSCI emerging markets continue to underperform MSCI World as the US dollar rises.

Domestic GDP growth is strong supported by robust demand from the consumer and government space; one of the supporting factors that was a surprise was dwelling investment. Business sentiment remains strong but showing some signs of peaking, while the labour market has continued to strengthen with employment and wages growing. Within the domestic market, ASX300 was down by 4.5% in the month, while the 10-year bond yields hovered at 2.8%. The RBA kept the cash rate unchanged at 1.5% in its latest monetary policy meeting.
