# Market Commentary

Despite a rocky end to 2018, equity markets across major regions (especially in developed markets) have rebounded and stabilised in February. On a financial year to date basis, MSCI World ex Australia and domestic equities (local currency) have outperformed emerging market equities. Despite the concerns of a global slowdown, equity markets have regained some momentum after the correction in Q4 2018.

Inflationary pressures on the global front remained relatively contained, with key regions such as Europe and China registering weaker than expected inflation in Q4 2018. Wage growth on a global level continues to be strong. However, that strength is not consistent across all developed markets, with some parts of Europe having relatively high levels of youth unemployment.

In the US, the fourth quarter GDP growth was softer than the third quarter, as expected given the government shutdown that took place in December 2018. Inflationary pressure in the US for PCE was reported at 1.7% while CPI was announced as 1.5%. Market expectations for inflation in the near term are below 2.0%. The US Federal Reserve kept their official Federal Funds rate range unchanged at 2.3%-2.5%.

However, recent remarks by the Federal Reserve Chairperson suggested a less aggressive stance on future rate hikes compared to the monetary policy meeting in December 2018. The change in tone reflects a central bank more sensitive to financial market stability and economic outlook. The US labour market continues on an overall upward trend with a marginal softening of 0.1% in wage growth data in the month of January 2019. US capital expenditure has softened in Q4 2018 but overall remains fairly moderate.

Within the Eurozone, broad-based macroeconomic data has softened.

The European Central Bank has officially ended its asset purchase program but remains committed in keeping interest rates negative in support of the Eurozone economy. The Eurozone unemployment rate has fallen further to 6.7%; below its long-term average. Exports from the Eurozone continue to trend downwards primarily driven by a slowdown in export demand from China.

The Chinese economy continues to slow as deleveraging and trade related weakness persist in the domestic economy. Recent changes to the domestic coal import policy at selected ports in China have resulted in a negative impact on coal exports from Australia. China has announced it predicts a weaker than expected economic growth in 2019 at 6.0 – 6.5 %, a marginal drop of 0.1% compared to 2018's growth rate.

Domestically, the RBA announced there will be no changes to the cash rate target of 1.5%. The RBA dropped its tightening stance, emphasising the next move on the cash rate could be an equal possibility of a hike or a cut. Business sentiment on new orders and business confidence remained below trend since tumbling in Q4 2018. Despite strength in the number of jobs added to the domestic labour market, the ANZ measure of advertisements fell another 0.9% in February. This is a fourth consecutive drop in the measure.
