# Market Commentary

International equity markets produced a small negative return in the first month of 2020 amid early news of the coronavirus outbreak. The US equity market was virtually flat for the month. The signing of the Phase One trade deal between US-China was positive for sentiment, while conflict between the US and Iran had little impact on markets. Economic conditions in the US remain broadly positive – the service side of the economy was resilient and consumption growth was steady although manufacturing remained weak as the December release of the Institute of Supply Management's (ISM) manufacturing survey showed ongoing contraction. The UK equity market underperformed in January, after outperforming in December. The Brexit withdrawal agreement was agreed by the UK and the EU at the end of January.

The Australian equity market was an exception, producing a very strong return over the month, although it did retrace somewhat late in January due to concerns about the spread of coronavirus. The strong return was also despite the local bushfire crisis.

European economic growth remained subdued but there was improvement in the manufacturing sector and trade. There was also some modest improvement in Japan's industrial production, as well as ongoing fixed asset investment leading into the 2020 Tokyo Olympics.

China's economic activity showed some signs of responding to accommodative monetary and fiscal policy, but the coronavirus outbreak will be a drag on economic growth.

Globally, central banks maintained a dovish stance on monetary policy. The US Federal Reserve, the European Central Bank, Bank of Japan, Bank of England, and Reserve Bank of Australia all held rates unchanged in the month, but indicated that monetary policy remained accommodative to support economic conditions. The People's Bank of China cut reserve repo rates and injected liquidity to support the economy.

Bond markets rebounded to deliver positive returns in January supported by dovish monetary policy and rising concerns about coronavirus weighing on the global economic growth outlook.

The downside risk arising from coronavirus also put downward pressure on commodities and the oil price, which contributed to the Australian dollar depreciating sharply against major currencies in January. The risk aversion in the market saw a rise in the gold price.

Listed property and infrastructure benefited from the reduction in bond yields, producing positive returns in the month.
